Purity/Specificity: This product was prepar using Rabbit IgG coupled

This product was prepared from monospecific antiserum by immunoaffinity chromatography using Rabbit IgG coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat Serum, Rabbit IgG, Rabbit IgG F(c) and Rabbit Serum. No reaction was observed against Rabbit IgG F(ab). This antibody will react with heavy chains of Rabbit IgG. Minimal reactivity is expected against other Rabbit immunoglobulins.

Application Details

Tested Applications:	Dot Blot		
Suggested Applications:	WB (Based on references)		
Application Note:	Anti-Rabbit IgG F(c) DyLight [™] 800 conjugate has been tested by dot blot. The emission spectra for this DyLight [™] conjugate match the principle output wavelengths of most common fluorescence instrumentation. This product is designed for immunofluorescence microscopy, fluorescence based plate assays (FLISA) and fluorescent western blotting. This product is also suitable for multiplex analysis, including multicolor imaging, utilizing various commercial platforms.		
Assay Dilutions:	All assays should be optimized by the user. Recommended dilutions (if any) may be listed below.		
FLISA:	>1:20,000		
IF:	>1:5,000		
WB:	>1:10,000

Western Blot

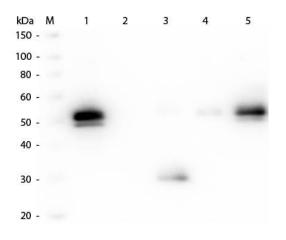

DyLight[™] dyes can be used for two-color Western Blot detection with low background and high signal. Anti-tubulin was detected using a DyLight[™] 680 conjugate. Anti-TNFa was detected using a DyLight[™] 800 conjugate. The image was captured using the Odyssey[®] Infrared Imaging System developed by LI-COR.
